

Dr. John Ferguson presents...

Hope for Asthmatics & Sinus Sufferers

So what about research? What research do you have to back up your claims?

SINUS AND RESPIRATORY INFECTIONS/SINUSITIS

Upper respiratory infections in children

ICA Review, 1990

“Patients frequently attest to the rapid improvement in upper respiratory symptoms following adjustment of vertebral subluxations...Children who are afflicted with frequent bouts of any of the upper respiratory disorders should be carefully checked for evidence of cervical subluxations.”

The atlas fixation syndrome in the baby and infant

Manual of Medicine, 1987

18-month-old boy, recurring tonsillitis, frequent enteritis, therapy resistant conjunctivitis, suffered from colds, rhinitis, ear infections and sleep disturbances. “Immediately after (spinal adjustment), the child demanded to be put to bed and, for the first time, slept peacefully to the next morning. Previously disturbed appetite normalized completely. Conjunctivitis cleared completely.”
Chiropractic can often bring about amazingly successful results.

Male child – age 4 – Diagnosis: retardation, asthma, Down’s syndrome, immune dysfunction

International Chiropractic Pediatric Association Newsletter, 1996

Patient had been evaluated at several clinics with the above disorders. Patient was on 11 medications on initial visit. After four months of care, all medications were withdrawn and the above diagnoses are being changed. Patient still under chiropractic care.

Not vocalizing well, absence of T-cells, immune dysfunction, has colds all the time

International Chiropractic Pediatric Association Newsletter, 1996

Male child - age 5. Prior diagnosis: malformation of cervical spine, severe scoliosis and C1 subluxation. Not vocalizing well. Absence of T-cells, immune dysfunction, has colds all the time. Surgery had been considered to correct skull positioning.

In the first series of adjustments, we adjusted the child in a sitting position utilizing a special infant adjustment. The Atlas was adjusted. Child was re-evaluated in native country and medical staff stated that everything was now normal. Child returned to U.S for care six months later. Vocabulary was now normal. Head position - normal. No colds evident during these months. Scoliosis was greatly reduced.

REMEMBER -If you have friends, family members or co-workers who are personally suffering from a breathing problem or have children dealing with these issues, please have them call our office for a New Patient Checkup!

My mission is to help as many people in my lifetime as I can - especially children!
